Undergraduate research assistant Kendall Sanderson wins scholarship from the Society for Health Systems

The Society for Health Systems has awarded its annual scholarship to HSyE research assistant Kendall Anderson. The award includes a $1,000 gift, and an additional stipend covering travel and registration for the Society for Health Systems annual conference. This award is given annually to students who are active members of SHS and have excellent academic standing at their university. Kendall was chosen for this honor based on his exceptional merit and continued interest in healthcare.

Kendall is currently completing his final co-op at Banner Health in Phoenix, Arizona. His first two co-ops were also in healthcare systems engineering; the first was at Boston VA Medical Center, and the second at Dana-Farber Cancer Institute. Through his time on co-op, Kendall has developed skills in lean engineering and data analysis.

In addition to being a member of the Society for Health Systems, Kendall is also an active member of the Institute of Industrial Engineers. He also participates in intramural roller hockey and broomball. He has been previously selected for the College of Engineering Dean’s List.
